# Mines and Prospects--Furnaces and Mills

# **NEW TRAMWAY** FOR GALENA MINE

Transportation to Be Provided for the Lead Output of U. S. Company's Bingham System.

omic transmission of its crop of lead ores at Bingham, the management of the United States company has decided on the construction of a reversible aerial tramway between the old Galena shaft and the receiving station at Old Jordan terminal on the main line, this equipment to span a distance of 170 feet. At the same time lead bins wit which to receive these ores will b constructed at the depot at Binghan the ores of this class to be handle separately and to be forwarded to th lead-blast furnaces of the smelter, tha are now approaching completion. T complete the system between the Ga lena, which has ever been productly of lend, silver and gold-bearing are o good quality, and on which active wor was resumed a short time ago, about thirty days will be required. For it thirty days will be required. For it a contract for lumber has already been placed and construction will be inaugurated at once. With which to receive the lead ores at the upper or Old Jordan station, at which connection is to be made, bins have already been added, the remainder of the journey to the station at Bingham to be over the long route. In the operation of the Galena tram the loaded buckets will be made to furnish the required energy, the empties going back as the former sweep down. Along these lines the cost of transportation will be reduced to the very lowest possible unit, with the total from mine to the receiving station at Bingham confined to somestation at Bingham confined to some thing less than 15 cents. That these preparations for the handling of the company's lead product have begur would indicate that the management has no doubt of the lead smelter's com-pletion as scheduled.

# DIXIE CRUDE ORES.

#### Sensational Consignment Arrives From the Southern Property.

The high-grade copper ores of the Dixie group of mines out of St. George, a little over three tons of which affords a ton of red metal, made its reappearance on the open market yesterday, the first lot relling on controls that revealed as much as 29.3 per cent of that metal. Just what the significance of Dixie orea in the open market while the Utah & Eastern company, by which the mine is operated; has a furnace on the ground is not easily understood, in the absence of the management. It is said, however, that it has been decided to try out local working charges once. out local working charges once more, and to ascertain what reductions have been made since its last appearance the consignment was made. Down at the mine the management is rushing work on the shaft, that a direct outlet between the new ore bodies and the sur-face may be established, while otherwise reports from the south denote no

# ters Try to Get Together.

The management of the Mammoth is again sparring with the smelters for a contract which will enable it to forward the output of its Tintle properties direct to the furnaces, as in times previous. To that end three four-hour vious to that end three four-hour shifts were put in yesterday by Superin-tendent Sam McIntyre, Jr., who had arrived from camp, and Secretary Wil-kinson, and, with bids from three sources, an agreement will probably be reached on the arrival of President Mc-Intyre from the west. The Mammoth is again one of the most active of Tintic's producers, and with the resources of the east ledge on which to draw, will, no doubt, continue the distribution of div-idends. At all events the money with which to pass around another in Sentember is in the company's stocking, while ores continue to arrive daily.

#### First Consignment Worms Its Way Over New Rails to Camp.

The first through consignment for Newhouse terminal, between Frisco and that camp, was delivered at its destination yesterday morning, the cargo a lot of cement for use on the equipment now going up there. Standing in the yards of the San Pedro at Milford are ten carloads of machinery and struc-tural steel that will be forwarded to camp as soon as word comes that the superintendent of construction is ready to receive it, while advices from the East indicate rapid deliveries from this Work on the main mill-stack will begin on Monday, this to be 160 feet above the foundation, while from this time building should progress rapidly, the completion of the plant, said Superintendent Dederichs last night depending on the delivery of material by the manufacturers. He will leave for camp again tonight.

# QUEEN MILL TO START.

#### New Plant on the Butterfield Ready to Begin Production.

The new mill with which the propertles of the Butterfield company at Bingham are being equipped is ready to go into commission, with R. B. Whitmore as its superintendent. With the new equipment, which promises most efficient service, the interests of the company cannot but be materially promoted. The management has a large amount of milling ore exposed and the product from that source should soon become a steady one. While the territory has been the scene of not a few ups and downs, it looks now as if it were to be made to reimburse those who have

#### THE DAY ON 'CHANGE.

#### Market a Lifeless One, With Star Con. Only Showing Activity.

The day on the mining exchange closed the sale of 12,360 shares of stock, for 1147.50, and with animation well nigh spended. What trading was done was entirely incking in spirit. Star Con, which had closed a contract with the mangement of the Bingham Con. for the reduction of its ores' without notice to the shorts, had them going for a few moments, during which it advanced to 1615 cents, although it was shorted late

### EMIGRATION'S ORES.

# Over 100 Ounces Silver Found in

SEATTLE-Hotel Northern. WASHINGTON-Willard, Raleigh.

Rock in Historic Canyon. Samples of ore from the Wagener interests in Emigration canyon that were introduced during the day as a sample of that which it is to bring in on trial present a most interesting composition. The gangue, a fiber-like material, has all the appearance of petrifactions similar to those that characterize the ores at Silver Reef, in the southern portion of the State, and where all theories concerning the occurrence of the metals in sandstone were first upset. The presence of the metals in the rock from the Wagener group, where sandstone also prevails, is revealed in a carbonate of some rock at the carbonate of some rocks and a chloride of silver in a of copper and a chloride of silver, in a carbonate of iron. Assays on the ma-terial show as much as 125 ounces sliver, with 3 to 20 per cent copper, while streaks running through the samples suggest, almost conclusively, the presence of coal. It is of this the management proposes to make a trial shipment to the smelter, results to be awaited with not a little eagerness by mining men generally. The owners of the prospect have been developing it quite steadily and the hope is expressed that they have not worked vainly.

# OHIO COMPANY TO ENLARGE MILL

Tonnage of Ore Overwhelming the Plant With Which the New Crowd Made Its Start.

The mines of the Ohio Copper company at Bingham have outgrown the mill, and to overcome the disparity the management will proceed at once with the installation of two additional tables. thus increasing the battery to eight, with an increase of 20 per cent in the capacity of the plant. For some time the ferruginous contents of the ore have been showing a steady increase, raid Manager Catrow yesterday, while the red metal is maintaining an average around 4 per cent, the product of the tables one of the most desirable that comes to the valley furnaces. Of this three carloads were marketed yesterday. In addition to the concentrates the management reported at the United States company's blasts with a car of crude ore which was settled for on controls that testified to the presence of 21.33 per cent copper, with \$1.80 gold per ton. The lot, which consisted of fifty tons, had a valuation of more than \$2,000, while another of similar quality is now being raised to the sur-Just as gratifying as the high nounced improvement in the yellow the latter having increased steadily as depth has been added to the incline. Most of the ore contained in the lot of or the incline, and while the ledge at that point has not been crosscut, the condition is a strong one. That additional tables have been ordered, however, is the best evidence of the growth of the undertaking under systematic endeavor, nor is it likely that enlargements shall be permitted to stop at

# HALF IS NOT TOLD.

#### Prominent Nevada Visitors on the Resources of Their Camps.

George S. Nixon, to whose energetic efforts the State of Nevada is so largely indebted for its present prosperity, is in town, accompanied by George T. Mills, a capitalist, and another equally aggressive exponent of the State's resources. Like the remainder of its en-terprising citizens, the visitors have each been prompt in embracing oppor-tunities held out to them by Tonopah and Goldfield, and are interested in many of their extraordinary develop-ments. Assuming that the miner who has not learned of the splendid achieve ments at Tonopah has found lodging in the cemetery, Mr. Nixon, upon whom Nevada is now seeking to thrust po-litical distinction, says of Goldfield, that there has been no exaggeration what-ever concerning its ledges nor their sensational contents. He is able to sensational contents. He is able to verify the story of high-grade ores for checks that were issued in payment for them by the American Smelting and Refining company of this city, have passed through the banking houses of which he is the general manager. Nor, he added, can any man appreciate the ex-tent of the camp's possibilities who has not made personal examination of the

public would have acquired ; better knowledge of the resources of Tonopah and Goldfield, said Mr. Mills, who is a nephew of the Hon. D. O. Mills, had the railroads between that locality and the furnaces of Sait Lake been more freely equipped. it is they have been overwhelmed by tonnages of which the camps are capa-ble, and since the washouts are momentarily incapacitated altogether the good things spoken by Mr. Nixon, Mr. Mills was ready to emphasize them. The gentlemen departed for the again last night, promising to repeat their visit at a later day.

# THE TRIBUNE NEWS STANDS. TURNS BACK TO HIS FIRST LOVE

A Well-Known Salt Laker Crystalizing Plans for the Erection of Iron Blast Furnaces.

With Pittsburg associates Morris R. Hunt of this city is now in Scattle, where he is crystalizing plans for the erection of a blast furnace with which to begin the production of pig iron with which to supply the needs of the coast. In addition to the raw ores that have been opened up in the State of Washington Mr. Hunt and his associates have those of Texeda and Vancouver clands upon which to draw, and it now looks as if the northern State was to best Utah out in the utilization of these resources. At what point the blast furnace will be located a letter from Scattle which tells of the splendid undertaking does not disclose, although it is understood that many of the towns are ready to subsidize it. The plant will start in with a capacity for producing an average of 100 tons of foundry iron dally, its market value on the coast ranging from \$18 to \$23 per ton, and while Utah has an exhaustless supply of the raw, Mr. Hunt and his associates have no doubt that a market for at least a portion of their output will be found here. Mr. Hunt, who has a large circle of friends here to rejoice in his success in the north, was for many years an iron manufacturer in the Lake Superior region, where he achieved a standing as the best char-

coal iron man in America. While Mr. Hunt and those who have joined him have gone north to exploit their enterprise, it is said that he es-teems the iron fields of Utah none the less. With a blast furnace on Puget sound, however, he gots the benefit of transportation by water with concessions from the Hill system, and with abundant water for the furnace has no doubt of its success.

## OUTPUT OF ASPHALTUM.

#### Tonnage Shows a Shrinkage, With an Increase in Value.

A recent bulletin by Director Walcott of the United States Geological Survey mays; The most important fact in regard to the production of asphalium and bituminous rock in 1892, as set forth in a report recently made by Mr. E. O. Hovey to the United States Geological Survey, is that there was an increase in value being a decrease in quantity of these products as compared with the amounts and values for 1902. The amount of asphalt and bituminous rock produced in 1932 was 29 Mi short tons, the amount produced in 1932 having been 195-duct increased from \$765.948 to \$88,046, or almost \$2.2 per cent. The large increase in value was due to the expansion of the industry of manufacturing "asphaltum" as a by-producet in refining California crude oil. On the other hand, many of the plants and mines which were in operation on bituminous rock and hard or gum asphaltum in 1962 reported no production in 1963. t the United States Geological Sdrvey

#### To Continue Development Work. becial to The Tribunc.

Special to The Tribune.

CALIENTE, Nev., Aug. 26.—William Turner and Morris White, owners of the Old England group of gold-copper claims near Goode Springs, on the line of the San Pedro road, passed through camp today with a supply of provisions for their work. They will continue development work in their tunnel, which is now in 129 feet on a five-foot body of high-grade ore, and hope to be able to make a shipment to the Sait Lake smelters by the first regular freight train which tuns out of their camp.

Joe Murphy returned from Salt Lake today bringing with him an assay on his free gold ore, which made the worthy Hibernian look like a four-time winner. His assays read 35.19, 55.30 and 228.59, the last from an eight-inch vein taken from the footwall of his ledge in a twenty-foot shaft, the remainder of the ledge going 35.19. He has taken out and sacked about twelve tons of this ore, and says he will get it to the railroad, eighteen miles distant, by burne conveyance.

Dick Vivian and James Van Vleet Dick Vivian and James Van Vleet passed through camp today from their mines seventeen miles northeast of Los Vegas, with three sacks of fine-looking gold-copper ore taken from the shaft of the Betty, one of the ciaims of their Lost Cabin group of nine claims. They will have it assayed in Salt Lake.

M. J. Conners and Milton Day, in com-pany with J. K. Ross, a mining expert from Cripple Creek, passed through camp today on route to their free gold claims on the upper Virgin river, where a thor-ough examination of these properties will be made, with a view to purchase by Coloradouss if they man out up to the made, with a view to purchase by loradouns if they pan out up to the

# Nampa's New Strikes.

Nampa's New Strikes.

The Boise Statesman, Idaho, says two new strikes are reported in the Nampa company's properties, controlled by Sult-Lakera. The first of these is an eight-feet ledge of ore which is worth Sil.so, according to assays made. The vein has been followed for 175 feet, and the find is apparently one of some importance. The other strike was a small vein of high grade at one side of the main ledge. Work had been maintained on the wrong side of the ledge for a time, and when it was changed the pay streak was found. So far there has been found about eight teet of the vein, which is about eighteen inches wide. The ore pays about \$57 per ton.

### BIG ZONE IN COLORS.

New Map Showing Position of Great Ledges at Hailey.

A new map, compiled at the direction of Manager M. Hiller Lipman of the Lipman Mines and Tunnel company, and which has just reached him in this city, affords a most instructive index to the great mineral-bearing zone between the great mineral-bearing zone between Hailey and Bullion, Ida, while defining the work which has been undertaken by the Lipman company. According to these delineations the long funnel, which will penetrate the zone for 3000 feet, will interact no less than five distinct ledges by which the country is fissured, the Point Lookout vein in the Lipman group to be intercepted at 2000 feet from the mouth of the avenue. On the long drive work, said Manager Lipman yesterday, will begin at once, with drilling to continue as rapidly as conditions shall permit.

### BIG PUMP IN ACTION.

## Corliss Plant at the Utah Copper Go-

ing at Full Capacity Again. The big Cornish pump in Bingham anyon, by which the Utah Copper ompany's concentrator is supplied with company's concentrator is supplied with water, went into full commission again yesterday morning, whereupon the "sinkers" that were employed were hung up, and conditions at the station are again at the normal. Of the new battery of vanners a dozen or more of the thirty have been set, with the four additional tables being installed, and in the rext fifteen days a new record additional tables being installed, and in the rext fifteen days a new record will have been established. At present the management is reducing about 450 tons of copper, gold and silver-bearing ore daily, and with operations President MacNeill and Treasurer Penrose left for Colorado yesterday very much

#### Rich Ore at Austin.

A correspondent writing the Reno Gazette from Austin, Nev., says: J. L. Garner and Frank Naughton next week ship a carload from their property in Jefferson canyon. The ledge now shows four feet of ore which sam-plec from \$100 to \$135 a ron, and by careplec from \$100 to \$130 a ron, and by careful sorting a shipping product averaging about \$400 is secured. Considerable work is being done on Jefferson canyon properties, and there is an important revival in the mining industry in that

The district about ten miles, south-east of Austin is coming to the front. Some thirty sacks of ore have been pro-duced that will go better than \$400 per

### Mining Notes.

General Manager Otto Stalmann of the Glasgow & Western Exploration company has gone to San Francisco on business connected with his undertakings, while General Superintendent Joseph Farren has gone to the exploration company's Navada

The Etah-Apex company at Bingham will not suspend shipments at a lot of 500 tons of ore, said Manager Orem yester-day, but will continue forwarding the rich stuff for tan days or two weeks, after which a contract will be made for its re-

The management of the Victor Con of Tintic yesterday marketed a lot of ore on controls showing as much as 16.1 per cent copper, nine ounces silver and \$1 gold per topper.

Late advices today from Tonopah and sodaville say that both the Carson & Colorado and the Tonopah rallreads are a serious trouble from the washouts that in serious trouble from the washouts that occurred there Monday afternoon and that it will be several days before traffic can be reopened on either, says the Gazette of Reno, Nev.

A message from State Senator A. B. Lewis says he has been unavoidably delayed in New York and that he will reach the local offices of the Monarch company
